EDUCATION

Yonsei University

Seoul, South Korea

B.S. in Computer Science and Engineering; Double Major in Korean Language & Literature

Mar. 2024 – Feb. 2029 (Expected)

RESEARCH INTERESTS

Data-intensive systems, distributed and stream processing, observability, storage systems, software reliability, and reliable ML systems.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Data Engineering: Kafka, Flink, Spark, Airflow, BigQuery, MongoDB, DuckDB, ClickHouse, Parquet

Infrastructure & Cloud: Kubernetes, Docker, AWS, GCP, Terraform, Nginx

Monitoring & Development: Grafana, Prometheus, Loki, GitHub Actions, Git, Linux

AI & Robotics: ROS 2, OpenCV, YOLO **Languages:** Korean (Native), English (Working Proficiency)

EXPERIENCE

Daangn

Seoul, South Korea

Software Engineer Intern, Data

Jun. 2026 – Present

- Develop and improve production data-transfer pipelines using Airflow, Spark, MongoDB, BigQuery, AWS, GCP, and Kubernetes.

- Work on reliability, schema handling, testing, and deployment for data ingestion and transfer workflows, with an emphasis on investigating and reproducing ambiguous system failures.

Osstem Implant

Seoul, South Korea

AI Education Instructor

Mar. 2026 – Present

- Deliver an AI training program for a cohort of 12 employees.

BrainConnect

Remote

Software Engineer

Apr. 2026 – May 2026

- Improved and maintained a production Next.js service, implementing product and administrative features while considering change impact and regression risk.

SELECTED PROJECTS

Compose Coffee Analytics Dashboard

Jan.–Mar. 2026

- Built an internal analytics dashboard using React, Electron, and DuckDB over approximately 400 million normalized POS and delivery-platform records.
- Automated normalization workflows across POS data and three delivery platforms and organized analytical data in Parquet for efficient local queries.

Real-Time Ride Data Pipeline [Link]

Jan.–Mar. 2026

- Built a containerized real-time pipeline with generator, ingestion, Kafka, Flink, and ClickHouse services.
- Built observability with Prometheus, Loki, and Grafana and tuned ingestor buffering, eliminating HTTP 429 responses and dropped events while stabilizing buffer utilization at 18–24%.

SELECTED PROJECTS (CONTINUED)

Dairuri: Darolink Community Platform [Link]	<i>Mar.–Jun. 2026</i>
– Built an Expo React Native/TypeScript app and Node.js/TypeScript API for a rural community service, deployed on AWS EC2 with PostgreSQL, Redis, and Naver Maps. – Separated mock and live APIs behind a shared interface and reused request handlers across the EC2 server and a Vercel serverless deployment.	
ROBO-404: AI Hazard Detection Robot [Link]	<i>Sep. 2025–Jun. 2026</i>
– Built a reproducible ROS 2/Gazebo/Nav2 environment with a Docker GPU runtime and bridged camera, odometry, LiDAR, and control topics. – Collected time-aligned images and robot poses for patrol datasets and trained YOLO on custom furniture-state data.	

HONORS, AWARDS & SCHOLARSHIPS

• KC Future Scholarship Foundation Scholar	Feb. 2026 – Present
• RC House Outstanding Program Award	Dec. 2025
• Encouragement Prize, Upstage LLM Query Hackathon	Nov. 2025
• Donam Scholarship Foundation Scholar	Mar. 2025 – Present
• Grand Prize, Yonsei RC Portfolio Competition	Jul. 2024

LEADERSHIP & ACTIVITIES

YBIGTA [Link]	Jun. 2025 – Present
<i>Data Engineering Team, 27th Cohort; Executive Board, 28th Cohort</i>	<i>Yonsei Big Data & AI Society</i>
Molgorithm [Link]	Mar. 2025 – Present
<i>Executive</i>	<i>Yonsei Algorithm Problem Solving Club</i>
ICPC Sinchon [Link]	Apr. 2025 – Feb. 2026
<i>Staff, Spring 2025; Camp Director, Winter 2026</i>	<i>Inter-university competitive programming community</i>
Residential Assistant	Mar. 2025 – Dec. 2025
<i>Yonsei International Campus, Muak House</i>	
CS Student Council	Apr. 2024 – Dec. 2025
<i>Executive</i>	<i>Yonsei University Computer Science Department Student Council</i>
